### Question 3

Complete  
Mark 1.00 out of 1.00

Flag question

What caused the Jackson Databind deserialization vulnerability?

- A flaw in the handling of polymorphic types
- Insufficient logging mechanisms
- The absence of any type handling logic
- The use of outdated cryptographic algorithms

### Question 4

Complete  
Mark 1.00 out of 1.00

Flag question

What configuration change can help prevent Log4Shell attacks?

- Setting 'log4j2.formatMsgNoLookups=true'
- Increasing the logging level to DEBUG
- Using a firewall to block all incoming traffic
- Disabling log rotation in Log4j

### Question 5

Complete  
Mark 1.00 out of 1.00

Flag question

What is a gadget class in the context of deserialization vulnerabilities?

- A utility class that simplifies JSON handling
- A class that logs all serialization and deserialization events
- A class that implements only the 'Serializable' interface without methods
- A class that can be exploited during deserialization to perform unintended actions
